PROFESSIONAL SUMMARY

Highly motivated Computer Science Engineering student with a strong foundation in backend development and a dedicated career pathway toward DevOps. Experienced in building robust web applications using Python and Django, writing automation scripts, and database management. Adaptable in configuring modern DevOps tools including Terraform, Docker, and Linux shell scripting. Recognized for technical problem-solving, team collaboration, and a commitment to delivery in fast-paced IT environments.

TECHNICAL SKILLS

DevOps & Systems:	Linux, Shell Scripting, Git, GitHub, Terraform, Docker, Cloud Deployment (Basics)
Languages:	Python, SQL
Web Frameworks:	Django
Databases:	SQLite
Soft Skills:	Team Collaboration, Problem-Solving, English Communication, Professional Personality

EDUCATION

Angel College of Engineering and Technology — Expected Graduation: May 2027
Bachelor of Engineering (B.E.) in Computer Science and Engineering — **CGPA: 85%**
Core Focus: Database Management Systems, Data Structures & Algorithms, Operating Systems, Software Engineering

Higher Secondary Certificate (12th Grade) — 2023
State Board School Education — **Percentage: 75.6%**

KEY PROJECTS

Rental-Based Property Application | *Backend Developer* — Jan 2026 – Mar 2026

- Designed and developed a rental property web application using **Python** and **Django** targeted across Tamil Nadu.
- Engineered backend automation scripts to handle expired booking deletions, optimizing database performance using **SQLite**.
- Integrated location-based mapping capabilities into the platform to provide users with a seamless search experience.

Collaborative Website Builder | *Developer* — April 2026

- Collaborated within a 5-person development team to design and build a modular website building platform.
- Contributed heavily to core backend architecture design, ensuring seamless API-level integration of modular components built by team members.

Sentiment Analysis of Social Media Conversations | *Backend & Data Contributor* — May 2025

- Collaborated in a team of five to construct a sentiment analysis module aimed at decoding emotions from text data.
- Assisted in formatting the Phase-1 project design blueprint, defining the problem statement and data parsing flow.

CERTIFICATIONS & CONTINUOUS LEARNING

- **Infrastructure as Code & Containerization:** Hands-on experience building infrastructure utilizing **Terraform** and microservices with **Docker**.
- **Linux Systems:** Cultivating advanced shell scripting proficiency to build automated task routines.
